PUGET SOUND SEED CO.
LA CONNER, WASH.

Sixteenth Annual Catalog

We desire to improve and perfect a standard of business, which shall include purity of stock, honesty of representation, carefulness of obligations and promptness in service.

Please Read Carefully

Seeds grown in the Puget Sound district have a higher germination and vitality test than seeds grown elsewhere. But all seeds are not successfully grown and harvested here owing to climatic conditions—so, in securing our seeds we make every effort to get them locally grown, but when we are unable to do so we try to get Northwest grown, or seed found most satisfactory for Northwestern states.

We have selected the varieties best suited for the home garden and use only the highest grade stock obtainable.

Look our catalog over thoroughly and compare the prices with other seed houses. . . . Give us a trial order—we feel sure you will be satisfied.

Plants, Bulbs and Dahlia tubers will be shipped at the time best suited for planting.

Ask Your Merchant for Puget Sound Seed

In addition to our MAIL ORDERS, we sell our seeds in DISPLAY CASES with your local merchant. The seeds found in these cases are the SAME HIGH QUALITY that we serve you with in our Mail Order Department. If your merchant cannot supply you, write us. Do not take any substitute; see that every packet bears the name "Puget Sound Seed Co."

NOTICE!

WASHINGTON STATE RETAIL SALES TAX

To comply with the State Retail Sales Tax Law, we ask you to add 2% to the total amount of your order, or in other words, 2 cents on every dollar. The tax applies to all seeds, bulbs, tubers and plants. Field seeds and seeds used for commercial production—producing for sale, such as truck gardening—are not subject to the tax.

OUR GUARANTEE

There are many causes why seeds do not germinate. Planting too early while the ground is still too cold and wet; planting too deep. Insects eat the tender sprouts as soon as they appear. Investigate the condition thoroughly before blaming the seed. We guarantee the vitality and purity of our seeds, bulbs and plants to the full amount of the purchase price.

WE PRE-PAY POSTAGE

D., to your mail box, PREPAID, at the price quoted in this catalog, with the exceptions of Grains, Grasses and Field Corn, orders from Alaska and Dominion of Canada. PLANT and VEGETABLE GARDEN

Our catalog describes all of the best standard varieties and the newer kinds that have become popular.

It is surprising how small a piece of ground is needed to supply a family of average size with fresh vegetables through the whole season. A piece of ground, say thirty by forty feet, will do it. There are many sorts of vegetables that pay to grow at home. In comparison with the ridiculously small cost, the return surely does warrant the effort.

ASPARAGUS

CULTURE—Seed planting—Asparagus may be sown from seed and a crop obtained in three years. In the early Spring sow the seed after soaking it for 24 hours in warm water, in drills one foot apart and one inch deep. The following Spring select the best plants and place in a permanent bed. Root Planting—One year may be saved by buying the plants and setting them at least two feet in the row and the rows not closer than four feet; see that the roots are well and evenly spread out and are not left exposed to the air.

GIANT WASHINGTON—Genuine rust-resistant strain. This variety is stronger and more productive, owing to its great vigor, than the old varieties and can be cut sooner from time of planting. Packet 5c—Ounce 25c— $\frac{1}{4}$ lb. 50c.

There are several hundred varieties of Spencer Sweet Peas, many of them of splendid merit, but in many cases the varieties are much alike. Those listed below are of the most distinct and highly recommended in the Burpee and Bodger strains.

CULTURE—It is a well-known fact that, in order to have the largest blooms of Sweet Pea, seed must be planted early to make the greatest root development during early spring. Sow seed as soon as the ground can be worked. Dig a trench a foot wide and deep and fill in with 6 inches of well-rotted stable manure; tread down firmly and fill in with good garden soil; plant seed in a straight line along the prepared surface, about 3/4 inch deep and about 3 inches apart. When plants are three or four inches high, thin out to 6 inches. Keep well watered.
